SET FOR VARICOSE VEINS TREATMENT

The set for varicose veins treatment "Flebogrif", equipped with retractable cutting elements, used for mechanical and chemical obliteration of superficial venous trunks, consisting in simultaneous mechanical damage of inner layer of vein and controlled administration of obliterating agent in form of foam or solution.

Advantages:

- painless outpatient procedure
- no thermal action
- easy to use
- no need to invest in additional medical devices
- short time of procedure
- possibility of adjusting the diameter of cutting elements to vein diameter
- excellent and long lasting cosmetic effect
- quick recovery
- without tumescent anesthesia

Set elements:

- straight needle 18G
- guide wire J .035"
- vascular sheath with dilatator 6F
- catheter "Flebogrif" 6F
- three-way stopcock
- syringe 5 ml Luer-Lock (2 pcs.)
